## The Solution

The plasma wall displays one image over nine plasmas and can display footage from a variety of sources including DVD, Digital TV, Foxtel and computer. Customised DVDs were sourced to provide the fish tank footage.

A background music system adds to the dining experience. The audio system operates independently to the plasma wall, enabling the restaurant to play a variety of music sources while continuing to display fish tank footage on the plasma wall. Although operating independently, the audio system and plasma wall system are both centrally controlled via Crestron touch panel.

The virtual fish tank is the centre of many dinner table discussions and some people even believe it is a real tank.

The Coral Sea restaurant though this state of the art visual display can provide its guests with an unforgettable dining experience.

## the FITOUT

Control System  
Crestron AV2 system processor  
Crestron 5" colour touch panel

Audio  
Nexia digital Signal processor  
10 x Bose Model 16 ceiling speakers

Video
